

Add Basic Auth to Apps

- In Traefik
 - under the middlewares tab
 - add basicAuth
 - add username and passwords as required

The screenshot shows the 'Middlewares' configuration page in Traefik. It features a dark theme. At the top, the title 'Middlewares' is displayed. Below it, there is a section for 'basicAuth' with an 'Add' button highlighted by a red box. Underneath, there is a 'Name *' field containing the text 'basicauth'. Below that, there is a section for 'Users' with an 'Add' button also highlighted by a red box. Underneath, there are two fields: 'Username *' and 'Password *', both of which are currently empty and highlighted with a red background.

- In application
 - edit the application
 - under integrations Traefik tab
 - select add middleware
 - name of middleware is name set in traefik

- save and update application
