

Add external services to Traefik

#This is bad code.

```
http:
  routers:
    to-local-ip:
      rule: "Host(`https://cloud.example.com`)"
      service: to-local-ip
      middlewares:
        - redirecthttps
      entryPoints:
        - https
      tls:
        caOptional: true
```

```
services:
  to-local-ip:
    loadBalancer:
      servers:
        - url: "http://192.168.0.2:80"
```

```
middlewares:
  redirecthttps:
    redirectScheme:
      scheme: "https"
    permanent: true
```

This is also bad code

```
http:
  middlewares:
    nofloc:
      headers:
        customResponseHeaders:
          Permissions-Policy: "interest-cohort=()"
```

```
secureHeaders:  
  headers:  
    sslRedirect: true  
    forceSTSHeader: true  
    stsIncludeSubdomains: true  
    stsPreload: true  
    stsSeconds: 31536000
```

```
redirecthttps:  
  redirectScheme:  
    scheme: "https"  
    permanent: true
```

```
routers:  
  to-local-ip:  
    rule: "Host(`qbittorrent.coltscomputer.services`)"  
    service: to-local-ip  
    middlewares:  
      - redirecthttps  
    entryPoints:  
      - https  
    tls: {}
```

```
services:  
  to-local-ip:  
    loadBalancer:  
      servers:  
        - url: "http://10.0.1.225:8080"
```
