

installing traefik for the first time

For docker files see [traefik](#) config chapter here

1. setup folder structure
 1. in the `~/docker` folder create the `traefik` folder
 1. create a `data` folder and a `docker-compose.yml` file
 1. see [traefik](#) for the `docker-compose.yml` file needed
 2. navigate to the new `data` folder
 1. create a new file called `acme.json`
 2. create a new directory called `configurations`
 3. create a file called `traefik.yml`
 1. see [traefik](#) for the config
 3. navigate to the `configurations` folder
 1. create a file called `dynamic.yml`
 1. for the config see [traefik](#)
