

Change log level

This will allow you to change the filter for which logs are recorded in the Fortigate firewall.

1. Open the cli
2. type the command `config log syslogd | syslogd1 | syslogd4 setting`
3. use command `set severity <log level>`
4. finally follow with `end` to set the config
5. next use `show log syslogd filter` to confirm the log level

CLI Console (1)

```
SMS-FortiGate # show log syslogd4 filter
config log syslogd4 filter
    set severity warning
end

SMS-FortiGate # config log syslogd4 setting

SMS-FortiGate (setting) # set server
<string>    please input string value

SMS-FortiGate (setting) # set server warning

SMS-FortiGate (setting) # end

SMS-FortiGate # show log syslogd4 filter
config log syslogd4 filter
    set severity warning
end

SMS-FortiGate #
```
