

Decrease Memory Usage

```
di de crashlog read
```

This command will show you the crashlog of the fortigate

```
"Kernel exits extreme low memory mode" looking for that error
```

```
diag autoupdate versions will show the versions of the autoupdates
```

```
diag autoupdate versions | grep Attempt -f this will show the times of autoupdate attempts
```

First thing we can do is disable the automatic security rating report.

```
config sys global
```

```
set security-rating-run-on-schedule disable
```

```
end
```

Next we will set the Internet Service Database to only download the in use databases

```
config sys fortiguard
```

```
set internet-service-database on-demand
```

```
end
```

follow that with

```
execute update-ffdb-on-demand
```
