

Kea DHCP Server not running

<https://redmine.pfsense.org/issues/14977>

If for some reason the Kea control socket lock file is present while Kea is stopped, then Kea can never start until that file is removed.

Attempting to start Kea while `/tmp/kea4-ctrl-socket.lock` exists, even if Kea is not currently running, results in a fatal error preventing Kea from running:

Removing the socket file allows Kea to start (`rm /tmp/kea4-ctrl-socket.lock`).
