

# Chrome Profile Migration

Here's everything you need to do:

1. On the computer that has the Chrome profiles that you want to retain:
  1. Copy the "User Data" folder found in this path to portable media:  
C:\Users\%username%\AppData\Local\Google\Chrome\
    2. Export this registry key to the same portable media:  
[HKEY\_CURRENT\_USER\Software\Google\Chrome\PreferenceMACs]
  2. Move the portable media to your new computer.

On the computer that you want to move the Chrome profiles to:

1. Make sure all Chrome browser windows are closed and chrome.exe is not running
2. Copy the "User Data" folder from your portable media to  
C:\Users\%username%\AppData\Local\Google\Chrome\
  3. Double-click the registry key that you saved to portable media in step 2
  4. Open Chrome, and you'll find your profiles are present!
