

# Demote or Promote Domain Controller

Both of these commands need to be ran under credentials that have authority to demote the server.

Both of these commands will prompt for new local administrator password

#This command will test if there are any problems with demotion

```
Test-ADDSDomainControllerUninstallation
```

#This will demote the server

```
Uninstall-ADDSDomainController
```

```
Install-WindowsFeature -name AD-Domain-Services -IncludeManagementTools
```

```
Install-ADDSDomainController -DomainName "centurionind.com" -InstallDns:$true -Credential (Get-Credential "centurionind.com\administrator")
```

```
*****
```

```
#
```

```
# Windows PowerShell script for AD DS Deployment
```

```
#
```

```
Import-Module ADDSDeployment
```

```
Install-ADDSDomainController `
```

```
