

Disable Bing Search

- Run Regedit.exe—just hit the Windows key and the R key to launch Run: dialog, type “Regedit,” and hit “OK.” Then hit “Yes” when it asks if you want to make changes.
- Find HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\Search
- Find BingSearchEnabled, and if it’s not there, create it by selecting New > DWORD (32-bit) Value > entering “BingSearchEnabled”
- Select that, set it to 0, and select “OK”
- Repeat the steps for BingSearchEnabled for CortanaConsent
- Reboot and you’re done
