

# Remove Network Printers

You can remotely remove the printer from the registry (I assume you have admin rights on the remote system).

HKCU\printers\connections

just delete the key for the old printer then stop/start the spooler

Pasted from <<http://help.lockergnome.com/windows/Removing-ers-remotely--ftopict440987.html>>

To remove stuck print jobs:

```
net stop spooler
```

```
del %systemroot%\system32\spool\printers\*.shd
```

```
del %systemroot%\system32\spool\printers\*.spl
```

```
net start spooler
```
