

Remove Profile

If you have a corrupt profile in Windows 10 there are two easy ways to remove it and rebuild it:

1: REMOVE CORRUPT WINDOWS PROFILE USING GUI:

CONTROL PANEL > SYSTEM AND SECURITY > SYSTEM > ADVANCED SYSTEM SETTINGS (from the menu on the LEFT)

.

Click SETTINGS button in the USER PROFILES section

.

Click on the user that has issues and click the DELETE button (note that you can not delete the profile you are using)

2: REMOVE CORRUPT WINDOWS PROFILE MANUALLY:

Open File Explorer (This PC) and go to C:\USERS\

.

Right click on the profile you want to remove and select DELETE

.

remove-corrupt-windows10-profile-manuallyOpen RegEdit

.

Expand HKLM > SOFTWARE > MICROSOSFT > WINDOWS NT > CURRENTVERSION > PROFILELIST

.

Click on each entry until you see the PROFILE IMAGE PATH that matches the one you want to delete

.

Right click on that entry and select DELETE

Reboot and sign in with the username you just removed and a nice new profile should be created.
