

Resume-HyperV-Replication Powershell Script

```
import-module Hyper-V
```

```
Get-VMReplication | Where-Object {$_.state -eq "Suspended"} | Resume-VMReplication
```

```
Start-Sleep -s 120
```

```
Get-VMReplication | Where-Object {$_.state -eq "Error"} | Resume-VMReplication
```

```
Start-Sleep -s 120
```

```
$FailedServers = Get-VMReplication | Where-Object {$_.state -eq "Error" -or $_.state -eq  
"Suspended"} | Select -ExpandProperty "Name"
```

```
write-host $FailedServers
```

To get current status:

```
Get-VMReplication
```
