

Search all DHCP servers in a domain for a hostname

```
Get-DhcpServerInDC <#| ?{ $_.DnsName -notmatch "rhsc-01-vsrv04"} #> | % {  
  
    $_.DnsName  
  
    $ServerName = $_.DnsName  
  
    try {  
  
        Get-DhcpServerv4Scope -ComputerName $ServerName -erroraction continue <#| ?{ $_.Name -  
notmatch "Guest" }#> | %{ $Scope = $_.ScopelId  
  
        <#Write-Host -ForegroundColor Yellow "Working on $Scope"#>  
  
        try {  
  
            Get-DhcpServerv4Lease -computername $ServerName -ScopelId $Scope | Where-Object {$_.  
HostName -iLike '*win7*'}  
  
        } catch {  
  
        }  
  
    }  
  
} catch {  
  
}
```

```
} <# | Out-File C:\Accent\DHCP.txt #>
```
